

## **Programming Core Spring Workshop**

<b>Description</b> :	This course covers the basics of programming the Spring framework.
<b>Prerequisites</b> :	Basic Java programming experience is required.
Audience:	Business analysts, developers, managers and other people interested in learning how to program Spring
Length:	Three days.

## **Objectives:**

After taking this course, you will be able to:

- 1. Understand and program the fundamentals of Spring, including dependency injection and how to wire beans together using annotations and XML.
- 2. Program Web applications using Spring MVC.
- 3. Understand the concepts of Spring Aspect Oriented Programming (AOP)
- 4. Create reliable programs that execute units of work using Spring's transaction support.
- 5. Use Spring AOP

## **Topic List**

- 1. Introduction to the Course
- 2. Introduction to the Spring Framework
- 3. The Spring Container
- 4. XML Dependency Injection

- 5. Spring Beans
- 6. Additional Configuration and Annotations
- 7. Introduction to Spring MVC
- 8. Spring and JDBC
- 9. Introduction to Spring AOP
- 10. Transactions in Spring
- 11. Introduction to JUnit
- 12. Testing Spring
- 13. Spring and Web Services (Optional Chapter)
